Optimization for Machine Learning 50.579
TTh 2:00-4:00 PM Think Tank 12

Instructor: Ioannis Panageas, Office: 1.602.19, Email: ioannis@sutd.edu.sg

Office Hours: By appointment.

Textbook: Convex Optimization: Algorithms and Complexity by S. Bubeck (online).
Recommended: Understanding Machine Learning: From Theory to Algorithms by Shai Shalev Shwartz and Shai Ben-David (online).
Remark: Some lectures (e.g., non-convex optimization) are not part of these books.

Prerequisites: Introductory undergrad courses* in Optimization, Linear Algebra and Probability & Statistics.

Course Description: This course will provide a theoretical overview of modern optimization methods, for application in machine learning and data science. In particular we will deal with the following: Convexity, Gradient Methods, Stochastic variants, Accelerated Methods, Online Learning and Applications to Game Theory, Maximum Likelihood Estimation, Non-convex Optimization, Critical and Saddle Points, Non-negative matrix factorization, PCA, min-max optimization (GANs), Adam.

Course Objectives: Learn some of the important, known theoretical guarantees about particular optimization techniques commonly used in machine learning; Read and understand applied and theoretical papers about Optimization for Machine Learning: Evaluate most important Algorithms, and algorithm convergence guarantees; Characterize trade-offs between time, size of data and accuracy.

Grading Policy:

- **Scribing lecture notes (20%)**: In a group of 1-2. Deadline is 3 weeks after the lectures. **Latex** template.

- **Homework (30%)**: One homework will be given during the 4th week of lectures. You must use **Latex** for your answers (provide a pdf file). Each student has to work individually.

- **Research Project or presenting a paper (50%)**: Write a report (group 1-2) in **Latex**. Research projects will be available during the third week of the lectures.

Important Dates:

Scribing Lectures Deadline	Three weeks after the lecture.
Homework Deadline	Week after recess week.
Project Deadline	13th week of lectures.
Project Presentations	Last week of lectures.
